Objective of the Dialogue:

More than seven years have passed since the accident of the Fukushima Daiichi nuclear power plant. Gradually the memory of the accident fades among the people who have been directly affected. And this is especially true for those who have not been directly involved in not only Japan but also abroad. In this context residents of the affected territories have the fear of being abandoned.

The objective of the dialogue is to share the actions already undertaken locally, nationally and internationally to bring to life the memory of the accident with its consequences but also its teachings. It is also about thinking about future actions to strengthen the sharing and transmission of the experience of the accident to the present generation and future generations.
